The WATExR Team

WATExR webinar “Climate extreme events: What’s behind seasonal prediction for water management?”

As part of our outreach activities during the last year of the project, we organized a webinar on February 17th 2021. During the webinar we showcased everything we learnt during the last three years, and included a roundtable with stakeholders that profiled achievements and limitations of the tools we have developed. The event was a success with more than 170 people registered. Find below the links to download the recording and the slides showed by our panelists.

The complete recording is available at <http://u.pc.cd/3MNctalk>

WATExR legacy video

We produced a 1 minute legacy video featuring the main outputs of WATExR, where the early stage researchers of the project have a main role.

The video is available at the WATExR Youtube channel at <https://www.youtube.com/watch?v=wrVjuSdV0V8>
